<p>Would have preferred:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Answer questionnaires (specifically 1) after an information session as was done on day 3.</li> <li><input type="checkbox"/> Have been advised to attend the ISO/IEC 17025 basic training prior to this course</li> <li><input type="checkbox"/> Alternate ways of projecting transparencies should be considered as projector requires for that are gradually becoming extinct!</li> </ul>	<p>Understood.</p> <p>Will consider in future courses. This frustration is the result of answering questions without first having read the material. See comment below.</p> <p>Agree wholeheartedly with this comment – but I cannot prevent members from attending just because they have not taken one of the lower level courses.</p> <p>Understood. Will investigate mobile technology solution to allow participants to hand create solutions that can be seen by the whole group. Current approach is still transparencies.</p>
<p>It would have been helpful to receive the course material ahead of time to become familiar with binder contents. Have the training manual 2 to 3 days prior to start of training</p>	<p>Have tried this in the past and some participants came without their materials. Perhaps we could e-mail contents. The problem is not really about not having the materials; it is about putting them into context.</p>

**Other comments.**

Very well done! Too bad we will never see you on an onsite audit of NLET.
